

## Visible Features

### 1. Warning Band

Reminder to review security features for check verification.

### 2. NaNOcopy™

Copies or scans reveal the word VOID in microprint code.

### 3. Relief Image

Three dimensional relief image “SECURITY PLUS” appears in the CAR area.

### 4. Microprint

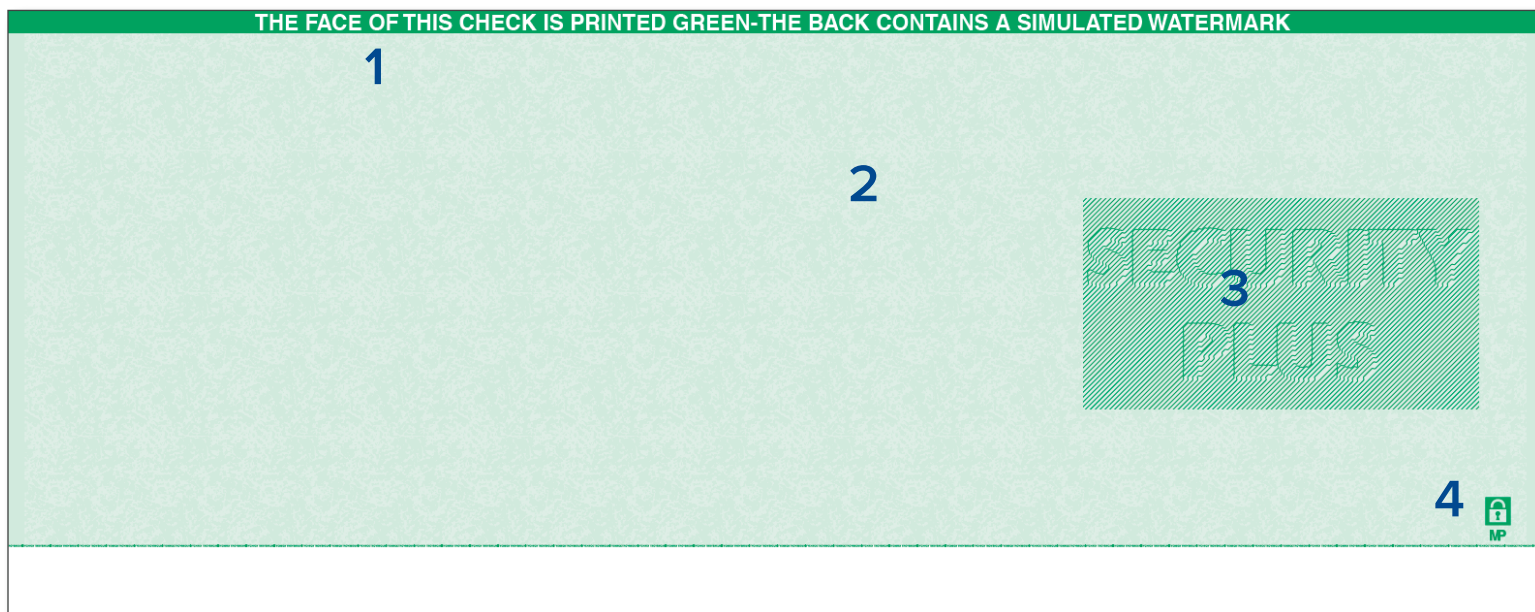

Appears as a line to the naked eye, when viewed under magnification text becomes visible.

#### Check Paper Security Scale

PAPER TYPE	SECURITY LEVEL	FEATURES
Security	Base-Level	8 Features
<b>Security Plus</b>	<b>Mid-Level</b>	<b>14 Features</b>
Fortress	High-Level	20 Features

**Color Options:** Blue, Red, Green

**Check Position Options:** Top, Middle, Bottom

The product image shown is for illustration purposes only and may not be an exact representation of the product.

## Embedded Features

### 5. Check 21 Friendly

Hidden microstructures survive low resolution scanning for authentication.

### 6. Chemical Protection

Discoloration will appear if solvent chemical alteration is attempted.

### 7. Fluorescent Fibers

Fibers glow when viewed under UV light providing additional verification.

### 8. Toner Adhesion

Paper texture promotes optimal adhesion to deter check fraud by lifting toner.

### 9. UV Dull Paper

Paper has no brighteners so UV features fluoresce for optimum visibility.

### 10. MICR / OCR Compliant

Meets or exceeds all ANSI standards & specifications for character recognition.

# Visible Features

## 11. Warning Box

Outline security features and examination methods for easy authentication.

## 12. SCANcheck™

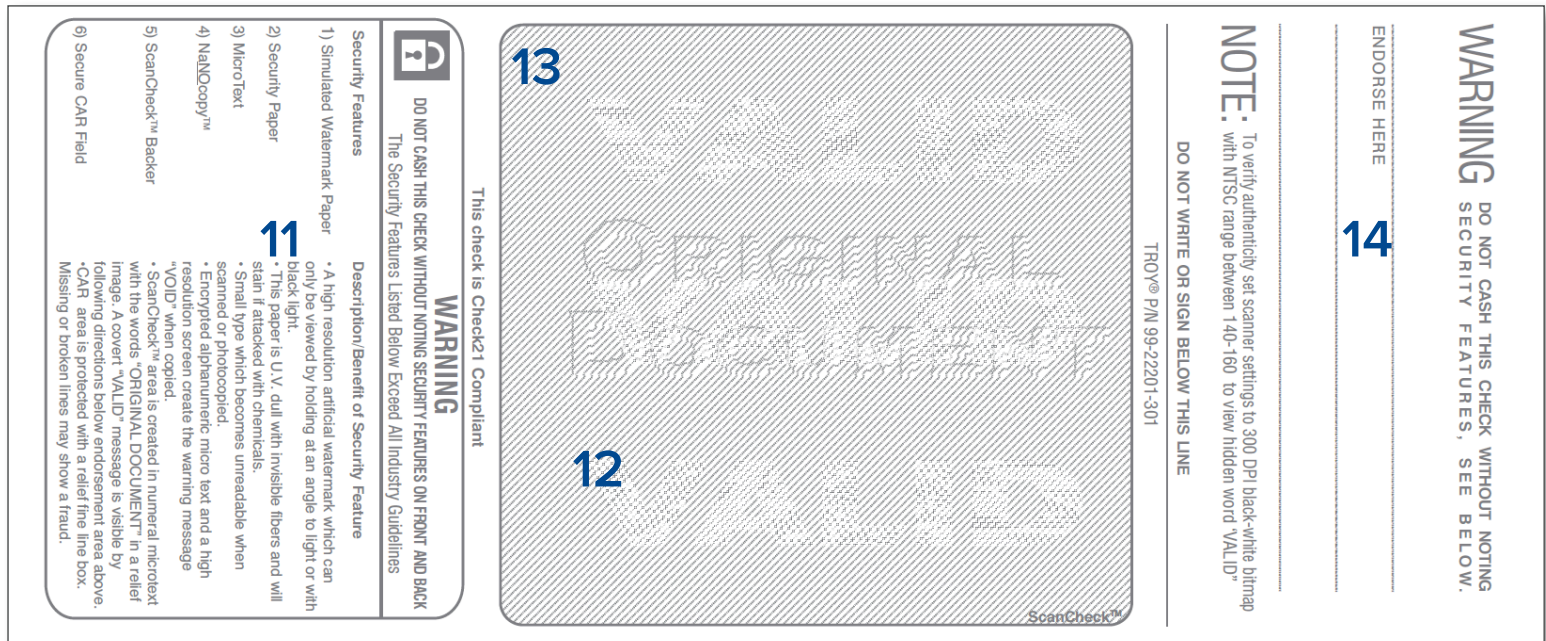

Custom scan settings reveal the word “VALID” for authentication.

## 13. Anti-Alteration Box

Three-dimensional relief image, watermark and microprint protect against alteration & replication.

## 14. Secure Endorsement Area

Microprint, watermark & coin reactive ink combine to reveal visible alteration attempts and provide means of validation.

The product image shown is for illustration purposes only and may not be an exact representation of the product.

## Simulated Watermark “SECURE BY TROY” Emblem

Printed on the back, each emblem/watermark can be easily viewed when the check is held at an angle. Special coin reactive pigment has been built into the watermark, allowing the ink to change color and reveal the watermark when rubbed with a coin, providing a means of verification.

Let's discuss which check paper is right for you.
